

Instructions for adding or replacing a video in your REI systems:

Go to one of the links below to download the video that works best for your vehicle.

- [MCI J4500 Air Circulation](#)
- [MCI J4500 Air Circulation with Parcel Rack filtration](#)
- [MCI J4500 Air Circulation with Proactive Air and Surface Purification System](#)
- [MCI J4500 Air Circulation with enhanced filtration \(MERV 8\)](#)
- [MCI J4500 Air Circulation with enhanced Filtration \(MERV 15\)](#)
- [MCI J4500 Air Circulation with UV-C lighting system](#)

Instructions for replacing the default safety video:

1. Open the overhead bin where the REI system is located. There is a small metal guard blocking an SD card. Take a screwdriver and remove the guard.
2. Once the guard is removed take the SD card out of the system.
3. Place it into a memory card reader connected to your computer
4. Locate the folder named "Priority"
5. Replace the new file with the existing file. (Note, the videos will play in alphabetical order)
6. Place the SD card back into the REI system. Start the coach and press the safety video button. The new file should play over the system.
7. After you verify the video works screw the SD guard back into place.
